the MAGNUS HARMONICA ORGAN. Please feel free to contact us at shop@cinematique-instruments.com

HOW TO INSTALL

To install, unzip and drag the instrument-folder to any hard drive. Launch Kontakt 3 and load the .nki instruments. Please do not move any file! By installing the product you accept the enclosed product license agreement.

DESCRIPTION

The Magnus Harmonica Corporation built and sold the most popular chord organs in the 1970s. These little organs use an electric fan to blow air across reeds, like a giant harmonica with keys. They are called 'chord organs' because they have chord buttons to be played with the left hand, similar to how a piano player plays with their left hand. Our MAGNUS HARMONICA ORGAN is unfortunately out of tune. But we did our best and it was worth it. The sound is charming!

CONTENT

We recorded every second note and also the some chords in major and minor. Everything just with one velocity layer. We also recorded a seperate release sound and the sound of the power switch. The mapping is as shown below. There is a script to control the reverb amount and to switch between the slow and fast mode of a rotary speaker.

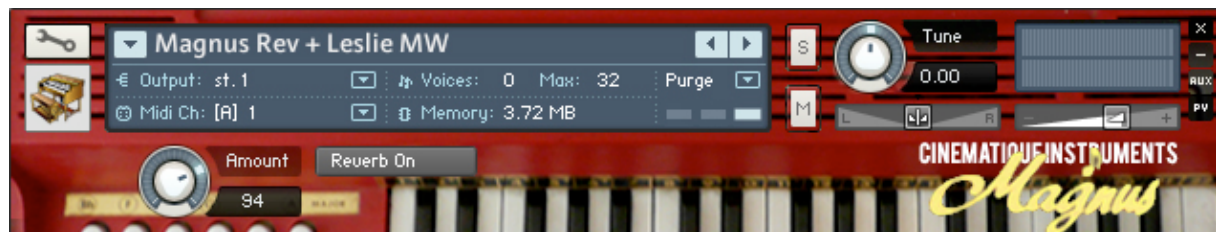

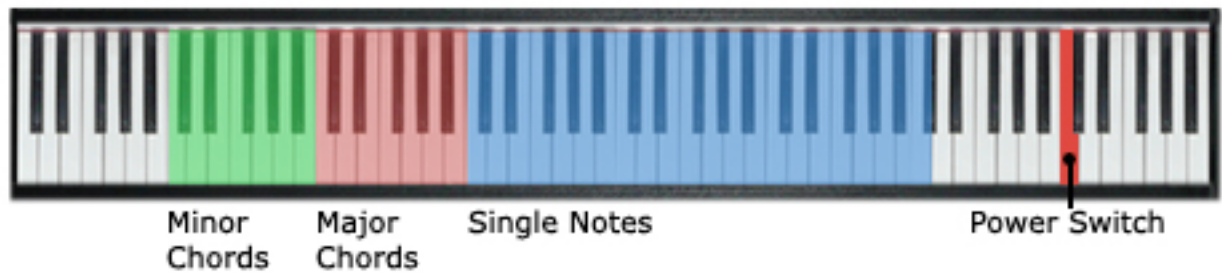

CINEMATIQUE INSTRUMENTS MAGNUS HARMONICA ORGAN

The instrument contains 3 patches

Magnus Harmonica Organ (controlling Reverb)

Magnus Rev + Leslie Pedal (amped version – using the Damping Pedal for switching the rotary speaker between slow and fast, controlling reverb)

Magnus Rev + Leslie MW (amped version – using the ModWheel for switching the rotary speaker between slow and fast, controlling reverb)

We wish a lot of fun using this instrument.
